

Report on study visit to TU Bergakademie Freiberg within TEMPUS - Energy Efficiency, Renewable Energy Sources and Environmental Impacts - master study "ENERESE"

Period: 19.10.2014. –26.10.2014.

Place: TU Bergakademie Freiberg , Germany

Supervisor: Prof. Jan Clements Bongarets

I spent six working days in Frieberg, according to programme earlier prepared by prof. Jan Clements Bongarets and Nicoleta Gurita from TU Bergakademie Freiberg

On the first day we met other participants from Asia, S. America and Africa at the conference IMRE 2014. We visited a mining company with partners from Africa and talked on possibilities of cooperation with University of Frieberg.

The following day each of us presented own University in the main building of University of Frieberg. After that we visited Faculty of Geosciences, Geo engineering and Mining, where we were closely informed on studying process at the faculty and opportunities for many forthcoming international students.

When the conference started we were introduced with alumni and professors at the IMRE study programme. It was also an opportunity for us to get better informed on this study programme and choose and apply the best practice at our ENERESE study programme. We attended the 15th anniversary of IMRE study programme in the central building at main square of the city. On this conference some ambassadors and public figures were present.

Report prepared by:

Edin Dolićanin, lecturer

State University of Novi Pazar, Department of technical sciences
